Overview

The Phases II and V Rules are part of the National Drinking Water Regulations of the federal Safe Drinking Water Act. These requirements have also been incorporated into Kansas Administrative Regulations (K.A.R.). Effective October 1, 2004 K.A.R. 28-15a - Primary Drinking Water Regulations adopted 40 CFR 141 by reference. In general, the requirements apply only to community water supplies (CWS) and non-transient, non-community (NTNC) water supplies. However, the nitrate and nitrite requirements additionally apply to non-community (NC) public water supplies.

Public water supplies are monitored for regulated contaminants under a standardized monitoring schedule that consists of three compliance periods of three years each. The total of these nine years make up each compliance cycle. The first three-year compliance period of this rule was from January 1, 1993 to December 31, 1995. The second compliance period was from January 1, 1996 to December 31, 1998. The third compliance period was from January 1, 1999 to December 31, 2001. The end of the third compliance period ended the first compliance cycle. A second nine years compliance cycle consisting of three, three-year compliance periods began on January 1, 2002 and will end on December 31, 2010. A third compliance cycle will begin on January 1, 2011 and will end on December 31, 2019.

January 1, 2011, Kansas will begin the first compliance period (2011–2013) of the third compliance cycle (2011–2019). This document updates the state's formal waiver and monitoring plan effective for the third compliance cycle.

Phase II and V Waiver Plans

During the first compliance period (2011–2013) of the third compliance cycle (2011–2019), Kansas Department of Health and Environment (KDHE) will continue a waiver provision when public water supply systems (PWS) have minimal exposure to certain regulated chemicals. Waivers will be granted under the following circumstances:

- 1) when the chemicals have not been registered for use in the state;
- 2) when the chemicals have not been used in the proximity of the source of supply;
- 3) when the systems have protected sources of water that are not likely to be contaminated; and
- 4) when wells have been constructed according to KDHE design criteria and the entry point has not had detects of the chemical or similar classes of chemicals.

KDHE is not proposing any waivers pursuant to the final arsenic rule adopted January 22, 2001.

State-wide Waivers

State-wide waivers will be issued by KDHE for all Phase II and V contaminants that are either not found naturally in source water or because of a state requirement that all systems are already using a treatment that is considered to be a best available technology (BAT) for the contaminant. The specific contaminants waived under this provision and the waiver protocol to be used for each chemical are described in detail below.

Asbestos

The Kansas Geological Survey has determined that there are no naturally occurring deposits of asbestos in Kansas. It is also known that asbestos fibers do not readily migrate through groundwater (GW). Therefore, all Kansas PWS are exempted from asbestos monitoring at their points of entry to the distribution system (POE). The only systems that are susceptible to contamination from asbestos in Kansas are those that have utilized asbestos-cement pipe in their distribution lines.

Systems without asbestos-cement pipe in their distribution systems were automatically waived from distribution system asbestos monitoring during the first compliance cycle (1993–2001). This same monitoring waiver was extended during the second compliance cycle (2002–2010), and will be extended to these same systems during the third compliance cycle (2011–2019).

Glyphosate and Cyanide

The BAT for these two contaminants is chlorination. Under K.A.R. 28-15-19, all public water supply systems in Kansas are required to maintain a chlorine residual of 0.2 mg/l free chlorine or 1.0 mg/l of combined chlorine. Therefore, there is no rationale for requiring additional monitoring for glyphosate and cyanide.

All Kansas PWS were waived from glyphosate and cyanide monitoring during the first compliance cycle (1993–2001). This same monitoring waiver was extended during the second compliance cycle (2002–2010), and will be extended to these same systems during the third compliance cycle (2011–2019).

Nitrite

Each PWS POE was monitored once for nitrite during the first compliance period (1993–1995) of the first compliance cycle (1993–2001). All nitrite levels were below 50% of the maximum contaminant level (MCL) at that time. Because chlorine converts nitrite to nitrate, and because K.A.R. 28-15-19 requires all Kansas PWS to maintain a distribution system chlorine residual, all Kansas PWS were waived from nitrite monitoring for the remainders of the compliance periods (1996–1998 and 1999–2001) of the first compliance cycle. This same monitoring waiver was extended during the second compliance cycle (2002–2010), and will be extended during the third compliance cycle (2011–2019).

Dibromochloropropane

Dibromochloropropane (DBCP) is not registered for use in Kansas. All CWS and NTNC water supplies have been monitored for DBCP by Method 524.2 at every entry point since the beginning of the first compliance period (1993–1995) of the first compliance cycle (1993–2001), and DBCP has never been detected. All water systems were waived from DBCP monitoring during the second compliance cycle (2002–2010), and this waiver will continue during the third compliance cycle (2011–2019). The Kansas Health and Environmental Laboratory (KHEL) will still continue to test for DBCP under Method 524.2.

Use Waivers

Use waivers will be issued by KDHE for contaminants meeting particular criteria regarding the conditions of their specific use within the area of the PWS.

Asbestos

All CWS and NTNC water systems with asbestos-cement pipe were required to monitor at least once during the first compliance period (1993–1995) of the first compliance cycle (1993–2001). All such systems also had a corrosivity analysis based on historical records performed by KDHE. Systems with high corrosion potential (as indicated by a Langelier Index significantly less than –1) were scheduled to monitor first. Samples were taken in areas of the water systems that are served by asbestos-cement pipe.

Systems that had levels of asbestos below the MCL were provided use waivers for the remainder of the compliance periods (1996–1998 and 1999–2001) of the first compliance cycle.

KDHE extended the use monitoring waiver during the second compliance cycle (2002–2010) for the remaining PWS which still utilized asbestos-cement pipe in their distribution systems. Under the following conditions, KDHE will continue a use monitor waiver during the third compliance cycle (2011–2019) for these same systems which are still utilizing asbestos-cement pipe in their distribution system:

All systems with asbestos-cement pipe will be required to monitor for asbestos during the first compliance period (2011–2013) of the third compliance cycle (2011–2019). Those systems with results below the MCL will receive a use waiver for the remainder of the compliance periods (2014–2016 and 2017–2019) of the third compliance cycle.

Any water systems with a POE using source water that is surface water/groundwater under the influence of surface water (SW) with results above the MCL will be required to monitor quarterly until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be reliably and consistently below (R&CB) the MCL. Any GW system with results above the MCL will be required to monitor quarterly until at least two consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL.

After a system is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the system shows three consecutive years of monitoring below the MCL, it will receive a use waiver for the remainder of the third compliance cycle.

Synthetic Organic Compounds (SOC)

During the first compliance period (1993–1995) of the first compliance cycle (1993–2001), Kansas PWS were monitored for the required inorganic chemicals (IOC), volatile organic compounds (VOC), and synthetic organic compounds (SOC) according to the first Kansas Waiver and Monitoring Plan. Use waivers were specific for endosulfan, dieldrin, and dioxin. For the SOC, Kansas experienced no confirmed detects of:

- 1) the base-neutrals analyzed under EPA method 525.2;
- 2) the carbamates analyzed under EPA method 531.1;
- 3) nor the herbicides analyzed under EPA method 515.1.

Based on results of the initial monitoring, KDHE broadened these waivers for the remaining compliance periods (1996–1998 and 1999–2001) of the first compliance cycle to include the SOC chemicals listed in Table 1. These waivers have been issued under the following circumstances:

- 1) when the chemicals have not been registered for use in the state;
- 2) when the chemicals have not been used in the proximity of the source of supply; or
- 3) when the systems have protected sources of water that are not likely to be contaminated.

These additional waivers are based on the following reasons:

- A) a lack of confirmed detects during the first compliance cycle (1993–2001);
- B) the levels detected in raw SW and GW are well below MCLs;
- C) and many of the listed herbicides, base-neutrals, and carbamates biodegrade in a short period of time or with chlorination or other routine water treatment.

<u>Kansas SOC Use Waivers</u>		
Analyte Name	Method	MCL (mg/L)
SOCs Method 525.1		
Benzo(a)pyrene -----		0.0002
Di 2-ethylhexyl adipate -----		0.4
Di 2-ethylhexyl phthalate -----		0.006
Hexachlorocyclopentadiene -----		0.05
SOCs Method 531.1		
Aldicarb -----		0.003
Aldicarb Sulfoxide -----		0.003
Aldicarb Sulfone -----		0.003
Carbofuran -----		0.04
Oxamyl -----		0.2
SOCs method 515.1		
2,4-D -----		0.07
2,4,5-TP -----		0.05
Pentachlorophenol -----		0.001
Dalapon -----		0.2
Dinoseb -----		0.007
Picloram -----		0.5
SOCs method 504		
Dibromochloropropane -----		0.0002
Table 1. List of Kansas SOC Use Waivers		

As a condition of obtaining these monitoring waivers, a system must not have had any detects of these chemicals during any previous monitoring. KDHE continued to approve use waivers for these chemicals during the second compliance cycle (2002–2010). Subject to the following conditions, KDHE will continue to approve use waivers for these chemicals during the third compliance cycle (2011–2019):

Systems with public water supplies that are in proximity to the use of specific chemicals or that do detect specific chemicals will be required to monitor for the specific chemicals that are actually used or detected.

If a chemical is detected at a water system's POE, the system will begin monitoring the POE quarterly and continue monitoring until either a MCL violation occurs or the POE is deemed by KDHE to

be R&CB the MCL. POEs that are deemed R&CB the MCL may be reduced to annual monitoring. If the POE shows three consecutive years of monitoring with no detect, it will receive a use waiver for the remainder of the third compliance cycle.

The following test methods will not be performed during the third compliance cycle (2011–2019) in the KHEL. KDHE anticipates that minimal or no analytical work will be required for analyses of samples screening for these chemicals. If required, testing will need to be contracted through a Kansas certified laboratory.

- A) SOC Method 508A for PCB'S
- B) SOC Method 547 for Glyphosate
- C) SOC Method 548 for Endothall
- D) SOC Method 549 for Diquat
- E) SOC Method 1613 for 2,3,7,8-TCDD (Dioxin)

Additionally, use waivers will be continued for the SOC listed in Table 2 for GW POEs only, subject to the following conditions:

In order to receive a monitoring waiver for these chemicals during the third compliance cycle (2011–2019), a system must run a triazine immunoassay screen on water samples from each active GW POE at least once during each three year compliance period (2011–2013, 2014–2016, and 2017–2019). The immunoassay method must be approved by KDHE and must meet a minimum detection level of at least 0.0003 mg/L. The Kansas trigger level (TRL) for triggering follow-up monitoring for SOC by Method 507/508 is a result greater than or equal to 0.00045 mg/L.

If the immunoassay result is less than 0.00045 mg/L, no further monitoring of the POE for SOC will be required for the remainder of the compliance period. Waivers will be evaluated during each three-year compliance period following the reporting of the immunoassay result. If any sample has a result greater than or equal to 0.00045 mg/L, then a confirmation sample must be collected and analyzed by an EPA approved method for all of the pesticide chemicals listed in Table 2 of this plan.

Additional Kansas SOC Use Waivers for GW POEs Only

Analyte Name	Method	MCL (mg/L)
SOCs method 507/508		
Alachlor-----		0.002
Atrazine-----		0.003
Chlordane-----		0.002
Endrin -----		0.002
Heptachlor-----		0.0004
Heptachlor Epoxide -----		0.0002
Lindane -----		0.0002
Methoxychlor -----		0.04
Polychlorinated biphenyls-----		0.0005
Simazine -----		0.004
Toxaphene-----		0.003
Hexachlorobenzene -----		0.001

Table 2. List of Additional Kansas SOC Use Waivers for GW POEs Only

Phases II and V Monitoring Plans

General Monitoring

All CWS and NTNC water systems that obtain water from their own GW or SW sources will monitor each active POE for IOC, VOC, and SOC based on their conformance with the appropriate waiver provisions. When monitoring results are greater than the TRL (with the exception of nitrate where the TRL is met, not exceeded) for a contaminant, additional monitoring for that contaminant is required to determine the extent of contamination.

Once a TRL is exceeded (met, in the case of nitrate), GW POEs must monitor quarterly for the contaminant for at least two consecutive quarters before KDHE will determine if the system is R&CB the MCL. SW POEs must monitor for the contaminant for at least four consecutive quarters before KDHE will determine if the system is R&CB the MCL. Factors affecting whether KDHE may require additional samples are the variability of the results and the nearness to the MCL.

All samples may be analyzed at the KHEL or at any laboratories that are certified by Kansas to do the required analysis by EPA approved methods.

Inorganic Chemicals (IOC)

In accordance with K.A.R. 28-15-16(d), all new proposed PWS and all new sources of water added to existing PWS will conduct an initial monitoring sample of the raw water prior to being permitted for use as a public water supply to ensure that potable water meeting Kansas Primary Drinking Water Regulations can be produced.

CWS and NTNC water systems that obtain water from their own GW or SW sources will monitor each active POE for the IOC listed in 40 CFR 141.62(b) as referenced in K.A.R. 28-15a-23. Compositing of IOC samples will not be allowed. SW POEs are scheduled to monitor annually. GW POEs are scheduled to monitor once during each three-year compliance period.

K.A.R. 28-15a-23 also requires CWS and NTNC systems to conduct monitoring of the following additional inorganic constituents, some of which are found on the list of National Secondary Drinking Water Standards (NSDWS): nickel; sodium; calcium; magnesium; potassium; phosphorus; chloride; sulfate; silica; iron; manganese; pH; conductivity; total dissolved solids; total hardness; alkalinity; and fluoride. Except for the public notice required when fluoride exceeds the secondary maximum contaminant level (SMCL), Kansas has no plans to enforce compliance with the NSDWS.

The TRL for increased monitoring for IOC will be the MCL. Samples from active POEs that exceed the TRL may, at the discretion of KDHE, be requested to submit a confirmation sample. If a confirmation sample is submitted, then if the average of the routine monitoring sample and the confirmation sample is greater than the TRL, quarterly monitoring will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

A system with a SW POE with results above the MCL will be required to monitor that POE quarterly until at least four consecutive quarters of results are under the MCL, and KDHE

determines the results to be R&CB the MCL. After the SW POE is determined to be reliably and consistently below the MCL, its monitoring can be reduced to annual.

A system with a GW POE with results above the MCL will be required to monitor that POE quarterly until at least two consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. After the GW POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the GW POE shows three consecutive years of monitoring below the MCL, its monitoring can be reduced to triennial.

Nitrate

The TRL for increased monitoring for nitrate will be the MCL. CWS, NTNC, and NC water systems that obtain water from their own GW or SW sources will monitor each active POE annually for nitrate. Annual samples from active POEs that meet or exceed the TRL may, at the discretion of KDHE, be requested to submit a confirmation sample. If a confirmation sample is submitted, then if the average of the routine monitoring sample and the confirmation sample is greater than or equal to the TRL, quarterly monitoring will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

Any POE required to conduct quarterly monitoring for nitrate will continue to do so until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. After a POE is determined to be R&CB the MCL, its monitoring can be reduced to annual.

Asbestos

PWS with asbestos-cement pipe will be required to monitor at least once during the first compliance period (2011–2013) of the third compliance cycle (2011–2019). Samples are required to be collected from distribution taps in areas of the water systems that are served by asbestos-cement pipe.

PWS that have levels of asbestos equal to or below the MCL will receive a waiver for the remaining compliance periods (2014–2016 and 2017–2019) of the third compliance cycle. Any system with asbestos results above the MCL will monitor quarterly until four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. After the system is determined to be R&CB the MCL, it can be reduced to annual monitoring. If the system shows results below the MCL for three consecutive years, it will receive a conditional use waiver for the remainder of the third compliance cycle.

Volatile Organic Compounds (VOC)

In accordance with K.A.R. 28-15-16(d), all new proposed PWS and all new sources of water added to existing PWS will conduct an initial monitoring sample of the raw water prior to being permitted for use as a public water supply to ensure that potable water meeting Kansas Primary Drinking Water Regulations can be produced.

CWS and NTNC water systems that obtain water from their own GW or SW sources will monitor each active POE for the VOC listed in 40 CFR 141.61(a), as referenced in K.A.R. 28-15a-24. The KHEL will perform analysis of DBCP and ethylene dibromide (EDB) using VOC method 524.2.

The TRL for increased monitoring for VOC (except for Xylene, Toluene, o-Dichlorobenzene, and Ethylbenzene) will be 0.0005 mg/l, in accordance with K.A.R. 28-15a-24. The TRL for Xylene, Toluene, o-Dichlorobenzene, and Ethylbenzene will be 1/1000 of the MCL. Therefore, the TRL for Xylene is 0.010 mg/l, the TRL for Toluene is 0.001 mg/l, the TRL for o-Dichlorobenzene is 0.0006 mg/l, and the TRL for Ethylbenzene is 0.0007 mg/l.

Samples from active POEs that exceed the TRL may, at the discretion of KDHE, be requested to submit a confirmation sample. If a confirmation sample is submitted, then if the average of the routine monitoring sample and the confirmation sample is greater than the TRL, quarterly monitoring will be required for that particular VOC. If a confirmation sample is not submitted, then quarterly monitoring will be required.

Any system with a SW POE with results above the TRL will be required to monitor that POE quarterly for that particular VOC until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL.

Any system with a GW POE with results above the TRL will be required to monitor that POE quarterly for that particular VOC until at least two consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL.

After a POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the POE shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial.

Ethylene Dibromide (EDB)

EDB is classified as an SOC but is monitored as a VOC under Method 524.2 at the KHEL. The TRL for EDB is 0.00001 mg/l. If a sample from an active POE exceeds the EDB TRL, the water system will be requested by KDHE to submit a confirmation sample by contracting with a Kansas certified laboratory using EPA Method 504.1 or 551.1. If a confirmation sample is submitted and results do not exceed the TRL, no increase in monitoring frequency will be required. If a confirmation sample is submitted and results do exceed the TRL, quarterly monitoring will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

If KDHE requests a confirmation sample, and/or determines that a POE is required to monitor EDB more frequently than triennial, the water system must contract with a Kansas certified laboratory that is certified for analyzing EDB with EPA Method 504.1 or 551.1.

Any POE required to monitor EDB quarterly must continue to do so until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL.

After a POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the POE shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial, and may also return to using the KHEL which will screen for EDB using EPA Method 524.2.

Synthetic Organic Compounds (SOC)

In accordance with K.A.R. 28-15-16(d), all new proposed PWS and all new sources of water added to existing PWS will conduct an initial monitoring sample of the raw water prior to being permitted for use as a public water supply to ensure that potable water meeting Kansas Primary Drinking Water Regulations can be produced.

CWS and NTNC water systems that obtain water from their own GW or SW sources will monitor each active POE for the SOC listed in 40 CFR 141.61(c), as referenced in K.A.R. 28-15a-24. The KHEL will perform analysis of EDB using VOC method 524.2. EDB is classified as an SOC but is monitored as a VOC under Method 524.2 at the KHEL. The TRL for EDB is 0.00001 mg/l. Refer to *Volatile Organic Compounds/Ethylene Dibromide (EDB)* for specifics on Kansas' EDB monitoring plan.

The TRL for SOC's are the reporting levels which, with some exceptions, are 10% of the MCL.

PWS with samples from active POEs that exceed the TRL may, at the discretion of KDHE, be requested to submit a confirmation sample. If a confirmation sample is submitted, then if the average of the routine monitoring sample and the confirmation sample is greater than the TRL, quarterly monitoring for that particular SOC will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

A water system with a SW POE with results above the TRL will be required to monitor that POE quarterly for that particular SOC until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. After a SW POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the assigned annual quarter for the reduced monitoring is in the Second Quarter, then the sample collection will be required in the months of May or June. If the assigned annual quarter for the reduced monitoring is not the Second Quarter, then one sample will be required in the months of May or June and one sample will be required in the assigned annual quarter.

If a SW POE of a small water system (population less than or equal to 3,300) shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial, with sample collection taking place in May or June at least once during the next three-year compliance period.

A water system with a GW POE with results above the TRL will be required to monitor that POE quarterly until at least two consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. After a GW POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If a GW POE shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial, and it can return to using the triazine immunoassay screen to satisfy the triennial SOC monitoring requirement.

A water system with a SW POE must conduct monitoring on that POE for SOC during the months of May or June. If the POE is on quarterly monitoring, then the Second Quarter monitoring must take place during May or June. This period is considered to be the time during which most SW systems in Kansas are susceptible to contamination from run-off carrying pesticides applied to crops.

SW POEs of Large Water Systems

Large water systems (population greater than 3,300) with a SW POE must monitor that POE for SOC in May or June during each year of a three-year compliance period.

SW POEs of Small Water Systems

Small water systems (population less than or equal to 3,300) with a SW POE that shows no previous detects, or with at least three consecutive years of no detects of SOC, may carry a triennial monitoring schedule for SOC for that POE. Each of these SW POEs must monitor for SOC in May or June at least once during a three-year compliance period.

GW POEs of Large and Small Water Systems

Large or small water systems with a GW POE that shows no previous detects, or with at least three consecutive years of no detects of SOC, may carry a triennial monitoring schedule for SOC for that POE. Each of these GW POEs may monitor for SOC using the triazine immunoassay screen at least once during each three-year compliance period.

Monitoring and Compliance Data Management

Monitoring/reporting, schedules, and compliance tracking will be managed in the Safe Drinking Water Information System (SDWIS). All sample results from the KDHE- KHEL will be downloaded to SDWIS. Sample results from private commercial laboratories that are submitted by water systems for compliance monitoring will be hand entered into SDWIS. Compliance with MCL and monitoring requirements will be checked by utilizing automated compliance determination and monitoring/reporting reports in SDWIS. Electronic images of copies of private laboratory results reports submitted by water systems for compliance monitoring will be maintained on KDHE's Image Now electronic filing system.

APPENDIX A

Acronym Glossary

BAT	=	Best Available Technology
CWS	=	Community Water System
DBCP	=	Dibromochloropropane
EDB	=	Ethylene Dibromide
GW	=	Groundwater
IOC	=	Inorganic Chemicals
K.A.R.	=	Kansas Administrative Regulations
KDHE	=	Kansas Department of Health and Environment
KHEL	=	Kansas Health and Environmental Laboratory
MCL	=	Maximum Contaminant Level
NC	=	Transient, Non-community
NSDWS	=	National Secondary Drinking Water Standards
NTNC	=	Non-transient, Non-community
POE	=	Point of Entry to a water system's distribution system
PWS	=	Public Water Supply Systems
R&CB	=	Reliably and Consistently Below
SDWIS	=	Safe Drinking Water Information System
SMCL	=	Secondary Maximum Contaminant Level
SOC	=	Synthetic Organic Compounds
SW	=	Surface Water/Groundwater Under the Influence of Surface Water
TRL	=	Trigger Level
VOC	=	Volatile Organic Compounds

APPENDIX B

Maximum Contaminant Levels and Trigger Levels For Inorganic Chemicals

Regulated IOC	MCL (TRL Are Same As MCLs)
Antimony	0.006 mg/L
Arsenic	0.010 mg/L
Asbestos (fibers > 10 micrometers)	7 million fibers/Liter
Barium	2 mg/L
Beryllium	4 mg/L
Cadmium	5 mg/L
Chromium	0.1 mg/L
Fluoride	4.0 mg/L
Mercury	2 mg/L
Selenium	50 mg/L
Thallium	2 mg/L

APPENDIX C

Maximum Contaminant Levels and Trigger Levels For Nitrate

Type of Public Water System	Nitrate MCL	Nitrate TRL
CWS	10 mg/L	10 mg/L
NTNC	20 mg/L	10 mg/L
NC	20 mg/L	10 mg/L

APPENDIX D

Maximum Contaminant Levels and Trigger Levels For Volatile Organic Compounds

Regulated VOC	MCL (mg/L)	TRL (mg/L)
1,1,1-Trichloroethane	0.2	0.0005
1,1,2-Trichloroethane	0.005	0.0005
1,1-Dichloroethylene	0.007	0.0005
1,2,4-Trichlorobenzene	0.07	0.0005
1,2-Dichlorobenzene (O-Dichlorobenzene)	0.6	0.0006 (1/1000 of MCL)
1,2-Dichloroethane	5	0.0005
1,2-Dichloropropane	5	0.0005
1,4-Dichlorobenzene (P-Dichlorobenzene)	0.075	0.0005
Benzene	5	0.0005
Chlorobenzene (Monochlorobenzene)	0.1	0.0005
Cis 1,2-Dichloroethylene	0.07	0.0005
Dichloromethane (Methylene Chloride)	5	0.0005
Ethylbenzene	0.7	0.0007 (1/1000 of MCL)
Ethylene Dibromide (EDB) (EDB is a SOC monitored as a VOC)	0.00005	0.00001 (reporting level)
Styrene	0.1	0.0005
Tetrachloroethylene	5	0.0005
Tetrachloromethane (Carbon Tetrachloride)	5	0.0005
Toluene	1	0.001 (1/1000 of MCL)
Trans 1,2-Dichloroethylene	0.1	0.0005
Trichloroethylene	5	0.0005
Vinyl Chloride	0.002	0.0005
Xylene	10	0.010 (1/1000 of MCL)

APPENDIX E

Maximum Contaminant Levels and Trigger Levels For Synthetic Organic Compounds

Regulated SOC	MCL (mg/L)	TRL (mg/L) (Same as reporting level)
Alachlor (Lasso)	0.002	0.0002
Atrazine	0.003	0.0001
BHC-Gamma (Lindane)	0.0002	0.00002
Chlordane	0.002	0.002
Endrin	0.002	0.00001
Ethylene Dibromide (EDB) (EDB is a SOC monitored as a VOC)	0.00005	0.00001
Heptachlor	0.0004	0.00004
Heptachlor Epoxide	0.0002	0.00002
Hexachlorobenzene	0.001	0.0001
Methoxychlor	0.04	0.0001
Polychlorinated Biphenyls (PCB)	0.0005	0.0001
Simazine	0.004	0.00007
Toxaphene	0.003	0.001

APPENDIX H

SW POEs With Any Single IOC Analyte Monitoring More Frequently Than Annual

Within this Appendix H Table,

SW = Surface Water and GU = Groundwater Under the Influence of Surface Water

Kansas has no SW or GU POEs with any single IOC analyte monitoring more frequently than annual due to exceeding trigger levels.
